

Two Weeks to Two Days

Teaching case, 3 October 2026. Future CFO_DP. Created and Copyright by Dr. Debasis Pahi, Assistant Professor, Model Degree College Malkangiri, Ph.D., IIT Kharagpur. On Monday 5 October, composite CFO Meera Iyer must decide whether Malabar Consumer Brands releases Rs 1.8 crore for two agents. The public prompt is Savi Khanna's BW CFO World report, byline 1 June 2026, listed on the 3 October 2026 edition page. Teaching rupees are not filings.

What the page is carrying

The report records a BW Businessworld–SAP Concur roundtable, Leadership in an AI World: The CFO's Perspective. Eight finance leaders described work past the pilot. This case uses named processes only. It does not invent an adoption percentage. The 3 October listing is why the case is dated today. It is not a second study.

Randstad India

Nagesh Bailur, CFO. A mandate to fill 5,000 factory positions: speed of discovery, validation and placement is revenue. Payroll for around 75,000 workers across approximately 2,000 clients. Files arrive as Excel, scans and system PDFs. An agent deciphers them. What took two weeks now takes two days. A human voice still finishes the call, because a fully automated call gets hung up on.

Swiggy

Rahul Bothra, CFO. Engineering shipping roughly 70 percent more releases than a year ago. The analyst layer in finance is being eliminated. The organisation, including a CFO who has not written SQL, is vibe-coding outputs that once needed two engineers and a product manager. A recruitment agent handles driver onboarding and dormant-partner reactivation in vernacular languages. Personalisation moved, in his words, from accurate to some extent to flawless, with a conversion lift. Model Context Protocol access: hundreds of developers within a month. Ambition: the agentic commerce layer of the country.

Happilo

Aneesh Kongot, CFO. Orders from e-commerce, general trade and modern trade were keyed into SAP. An agent now reads order emails and punches them in. He reports significant traction. Planning is next. For a firm with limited people, the sequence starts at the keystroke, not at an enterprise model. The control to name is price, ship-to, and who may post.

Atyati

Praveer Surana, CFO. Banking services in more than 1,00,000 villages across 30 states and union territories. Models predict delinquencies so collection effort is aimed. Finance analysis moved from weeks to days. He also reported a lot of hallucination in tax. Reviewers relax when the output seconds their view. For regulation-specific work he allows at least a couple of years. That sentence designs the sample.

Rittal and EY

The Rittal finance leader is named Sinha in the report, without a first name in the text retrieved. The CFO is not doing routine accounting. The CFO helps other departments use the data they prepare. Readiness of the people who feed the tool is the worry. Radhakrishna Sunku, EY Global Delivery Services, 90,000-plus people in nine countries: AI reconciles thousands of travel invoices with airline data, matches GST credits, and posts to SAP. Every employee completes a minimum of AI courses each year.

Agreement in the room

AI is not one thing. Many wins blend rules and models. Finance teams are being rebuilt. Caution is not scepticism. Jobs change. Sinha's reported line is that people are asked to refurbish themselves. A related Bailur remark, byline 20 May 2026, says he has read that computer-using jobs could potentially be replaced. He locates the enduring role in risk and judgment. The partner role becomes more important, not less.

Composite arithmetic

Malabar is invented for the classroom. Revenue Rs 640 crore. 1,200 person-hours a month on rekeying at Rs 450. Year-one quote Rs 1.8 crore. A 0.4 percent claim spike wipes a sponsor saving. Do not cite these rupees as company results. The public numbers stop at the roundtable.

Options and clocks

Option C is the lean: both agents, clean document classes only, human signature above Rs 2 lakh and on any price or GSTIN exception, no payback sentence until two clean monthly samples. Clocks: cycle time, error rate caught by a reviewer who did not prompt the model, handoff rate. Zero handoff is a finding.

Teaching note

Open on the two-weeks line until the room separates cycle time from staffing revenue. Put Surana beside it. Ask who reviews a tool the CFO built. Photographs of claims should reach a human with no model suggestion on the screen. That is how you block the seconding problem. Assign a one-page memo with two footnotes to Khanna and one sentence that states what is composite.

Marker standard

Acceptable public figures only: about 75,000 workers; about 2,000 clients; 5,000 factory roles; two weeks to two days; roughly 70 percent more releases; hundreds of developers in a month; more than 1,00,000 villages; 30 states and union territories; 90,000-plus people; nine countries; thousands of travel invoices a month. Meera Iyer stated as reported is a fail. AI generates. Data informs. Finance measures. Accounting verifies. Human judgment decides.
